

Modified Pocket: GK2-3/4

"The ball must remain visible above the bottom rail of the sidewall. If the crosse head is a solid-body construction, no more than two-thirds (2/3) of the ball may be visible below the bottom of the sidewall."

All other existing requirements pertaining to the head of the cross (e.g., the ball being able to move freely, ball being able to roll out of the front and back of the cross, holes & gaps, proper stringing, etc.) still apply.
